SKILLS

JavaScript · TypeScript

React · React Native

Node.js · NestJS

HTML5 · CSS3 · Vue.js

Material UI · Three.js

Python · Java

FastAPI · Spring Boot

REST APIs · WebSockets

MySQL · PostgreSQL

Jest · Vitest · JMeter

Docker · AWS · CI/CD · Git

LANGUAGES

Polish · Native

English · C2

CERTIFICATIONS

EE. 09 & EE. 08

Google Associate Cloud Engineer

Google Data Analyst

Google UX Design (in progress)

HOBBY

Tabletop RPG

Volleyball

Music performance

ABOUT ME

Software Engineer with full-stack experience building scalable web applications. Experienced in **React**, **TypeScript**, **Node.js**, and **FastAPI**, with a strong focus on backend development and system reliability. Skilled in debugging, system maintenance, and delivering features based on business requirements.

Currently pursuing a master's degree in computer science.

EXPERIENCE

Software Engineer, Solid Studio — *January 2026 - Present*

- Maintained and enhanced a production e-mobility platform used by international clients, by developing backend features and resolving cross-stack issues (**React frontend and Node backend services**), improving system stability
- Collaborated directly with clients to gather requirements and troubleshoot technical issues, handling **10+ support cases weekly**
- Applied domain expertise in e-mobility protocols **(OCPI, OCPP)**
- Monitored system performance and responded to incidents using **AWS CloudWatch**
- Contributed to the development of an **AI-based tool** for automating ticket analysis
- Worked in a cross-functional **Agile team**, participating in code reviews, sprint planning, and deployments

Tutor, Edualy — *September 2021 - Present*

- Delivered 1:1 tutoring in CS, math, and physics to **50+ students**, improving exam performance
- Explained technical topics **(algorithms, data structures, web technologies)** in a clear and accessible way
- Customized lesson plans to individual learning needs, improving engagement and outcomes

Junior Software Engineer, Codibly

February – May 2019 | March 2024 – January 2026

- Designed and implemented frontend and backend features for e-mobility and renewable energy systems using **React and Spring Boot**, contributing to production-ready solutions
- Developed and maintained production web applications, extending existing modules and ensuring system reliability
- Collaborated with clients and cross-functional teams, presenting progress and proposing **functional and UX improvements** to stakeholders
- Performed testing activities, including unit testing **(Jest),** manual testing, and performance testing using **JMeter**, identifying and resolving critical issues
- Participated in **Agile/Scrum** processes (code reviews, sprint planning, daily stand-ups), ensuring timely and high-quality feature delivery

EDUCATION

Master's degree in Computer Science

Jagiellonian University • October 2024 – present

Developing an exploratory interface for cultural heritage using knowledge graphs and XAI as master's thesis

Bachelor's degree in Applied Computer Science

Jagiellonian University • October 2021 – June 2024

IT Specialist

Upper Secondary School of Communications • September 2017 – May 2021

Volunteered teaching programming fundamentals to diverse student groups, designing and delivering individual projects
